# 1. Project Title

## Integrated Smart Alumni Networking and Career Support Portal

DOMAIN

**Full-Stack Web Application**

# 2. Abstract

**ABSTRACT**

The Integrated Smart Alumni Networking Portal is a web-based platform designed to connect students, alumni, and educational institutions through a centralized digital environment. The main purpose of the system is to improve communication, networking, mentorship, and collaboration between students and alumni. The portal allows users to create and manage profiles, search for alumni, establish connections, participate in events, and share career-related information. Students can interact with experienced alumni to receive guidance regarding careers, skills, internships, and professional opportunities. Alumni can contribute their knowledge and experience to support current students and remain connected with the institution. The system also provides administrative features for managing users, events, and portal activities.

# 3. Problem Statement

### 1. What is the current issue?

Students and alumni use different platforms to communicate, making networking and information sharing difficult.

### 2. Why is the problem important?

Alumni experience can provide valuable career guidance, mentorship, industry knowledge, and opportunities to current students.

### 3. Who is affected?

Current students, alumni, and educational institutions are affected by the lack of continuous and organized interaction.

### 4. What specific gap or challenge exists?

The main gap is the absence of one smart platform that brings alumni profiles, networking, mentorship, events, and professional collaboration together.

# 4. Objectives

OBJECTIVE 01

**Connect students and alumni through one centralized platform.**

OBJECTIVE 02

**Provide career guidance and mentorship opportunities.**

OBJECTIVE 03

**Encourage networking, knowledge sharing, and collaboration.**

OBJECTIVE 04

**Maintain long-term engagement between alumni and the institution.**

# 5. Scope

## ✓ IN SCOPE

- Student & alumni registration
- Secure login and profile management
- Alumni search and connections
- Mentorship and career guidance
- Events and announcements
- User communication and networking
- Admin management
- Centralized alumni records

## ✕ OUT OF SCOPE / FUTURE WORK

- Online payment and transactions
- Job placement guarantee
- Video calling and live meetings
- Social media integration
- AI-based career prediction
- External college database integration
- Alumni verification by government agencies.

# 6. Literature Survey

| Paper / Year | Approach / Key Finding | Limitation / Gap |
|---|---|---|
| Unibridge – 2025 | Used social networking and data mining to connect students and alumni and recommend potential mentors. | The system was a proof-of-concept prototype with basic recommendation functionality. |
| Jagdale – 2025 | Developed a web-based alumni platform with profiles, job postings, events, forums, and admin management. | Students connect with alumni through LinkedIn, so networking is not completely integrated within the platform. |
| Chi, Jones & Grandham – 2012 | Developed a web-based Student-Alumni Network to improve communication, experience sharing, guidance, and collaboration. | The system mainly focuses on networking and communication, leaving scope for integrating more alumni services. |
| Ved, Tanna, Yeole & Kamble – 2022 | Developed a responsive web application for managing alumni records and improving university–alumni interaction using database and web technologies | Mainly focuses on alumni data management and institutional interaction, with scope for stronger student networking and mentorship. |

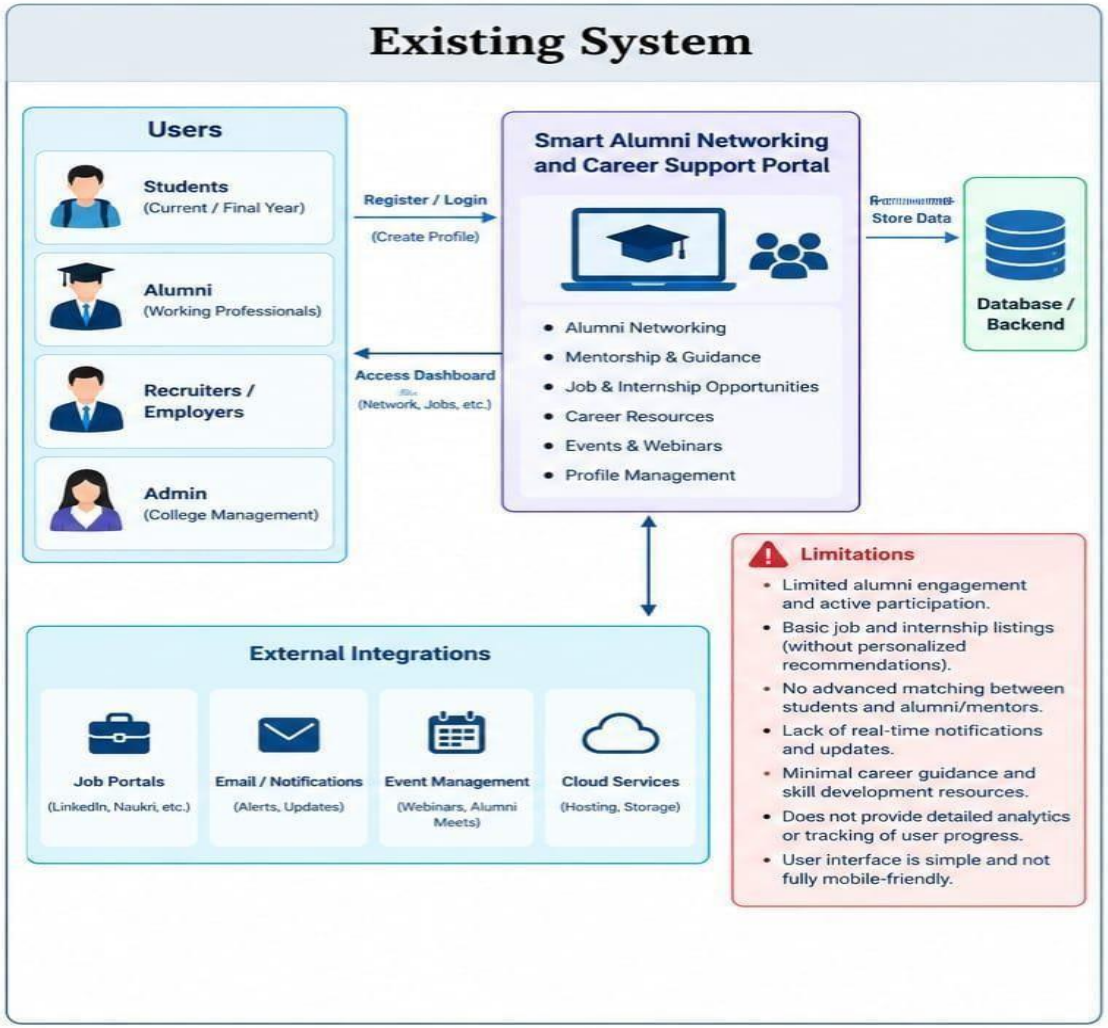

]

# 7. Existing System

**IDEA**

- Alumni information is maintained through separate college records and communication platforms.
- Students and alumni mainly connect through social media, email, or informal groups.
- Alumni profiles, events, job opportunities, and mentorship are not managed in one place.
- Communication and networking are difficult to organize and track.
- Existing systems generally focus on record management rather than continuous student–alumni engagement.

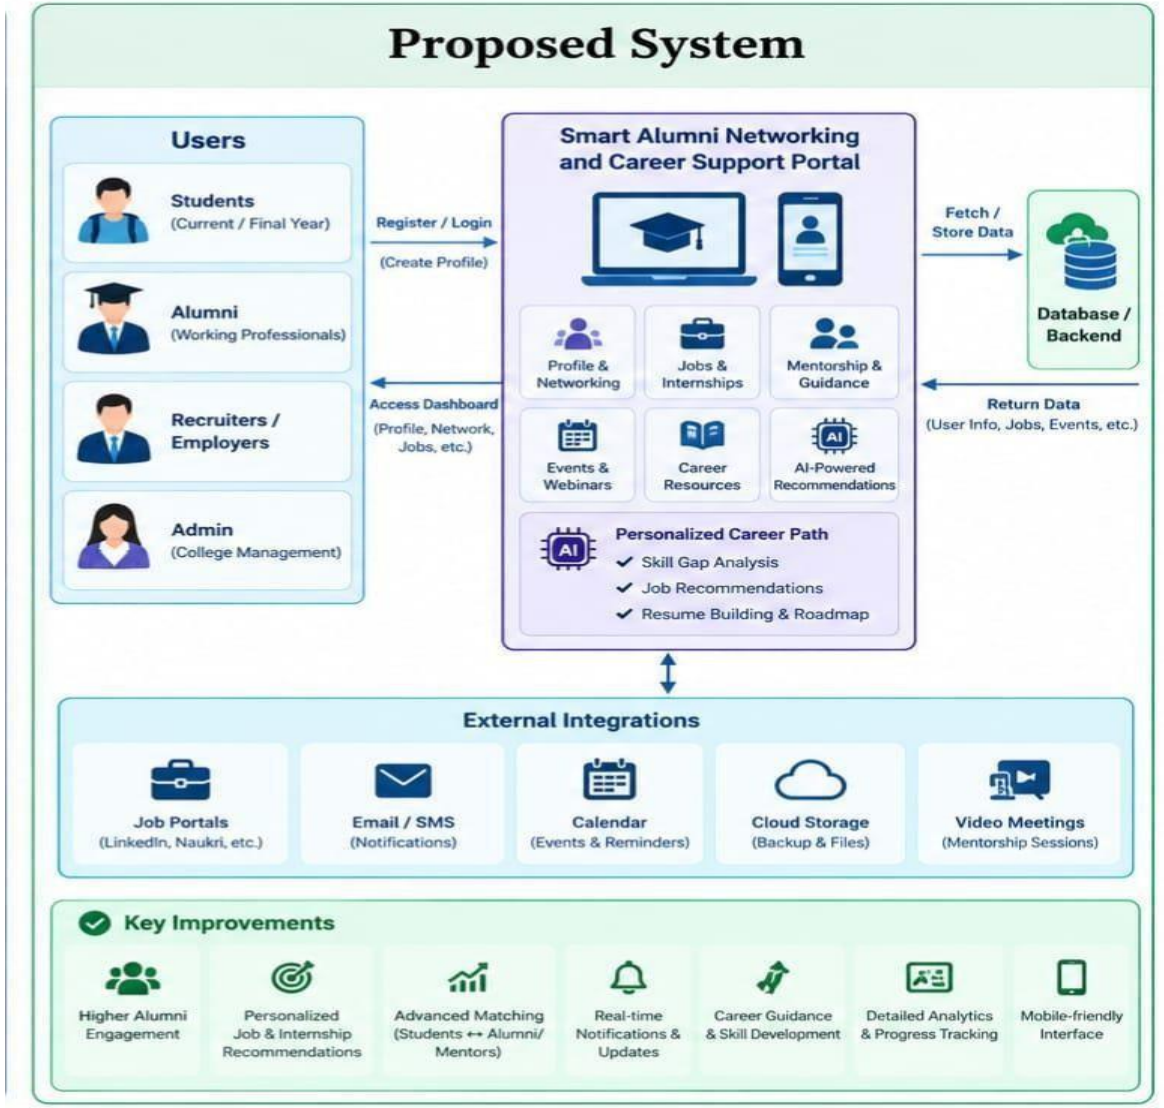

# 7. Proposed System

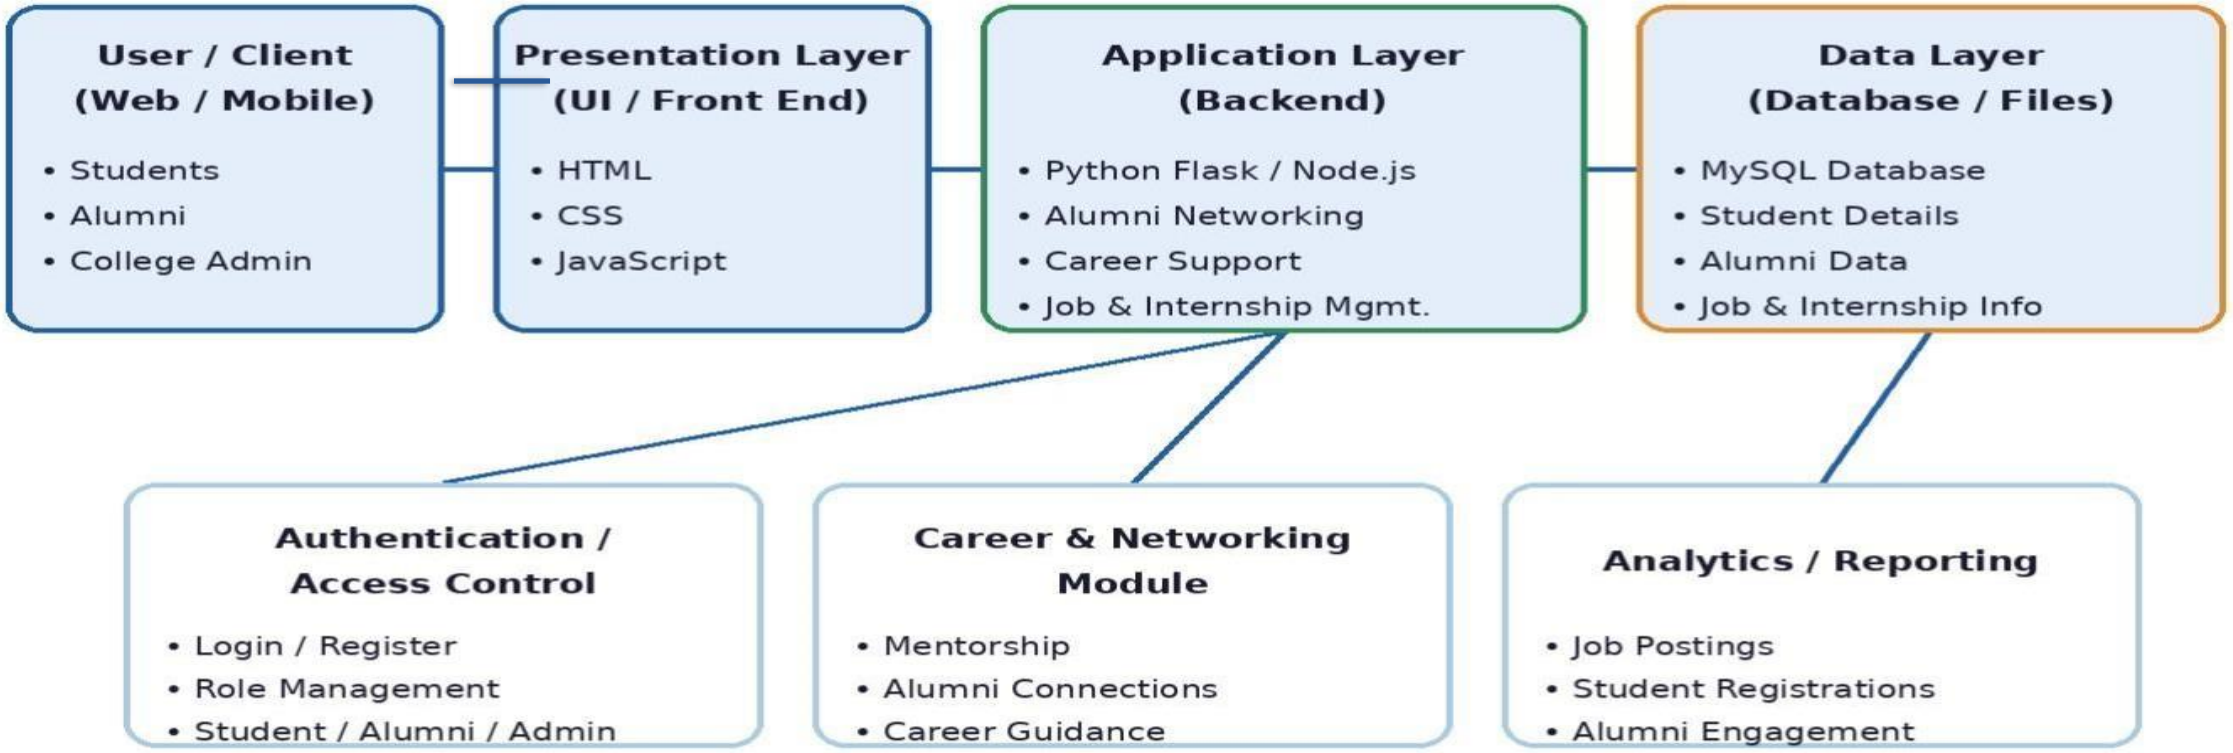

**IDEA**

- A centralized web-based platform connecting students, alumni, and the institution.
- Provides secure registration, login, and profile management.
- Enables students to search, connect, and communicate with alumni.
- Supports mentorship, career guidance, internships, and job-related information.
- Provides events, announcements, notifications, and networking activities.
- Admin can manage users, profiles, events, and portal activities.

# 8. System Architecture

**Data Flow: Input → Validation → Processing → Result /Report**

# 9. Modules

### 1. Authentication / Access Control

- Login / Register
- Role Management
- Student / Alumni / Admin
- Secure sessions

### 2. Profile Management

- Student & alumni profiles
- Education & work details
- Skills & interests
- Profile verification

### 3. Alumni Networking

- Alumni directory & search
- Connect & message
- Events & reunions
- Discussion groups

### 4. Career Guidance / Mentorship

- Mentor matching
- Guidance sessions
- Resume & interview tips
- Q&A with alumni

### 5. Job & Internship Management

- Job postings
- Internship opportunities
- Apply & track status
- Alumni referrals

### 6. Analytics / Reporting

- Job postings
- Student registrations
- Alumni engagement
- Admin reports

# 10. Data Flow Diagram — Level 0

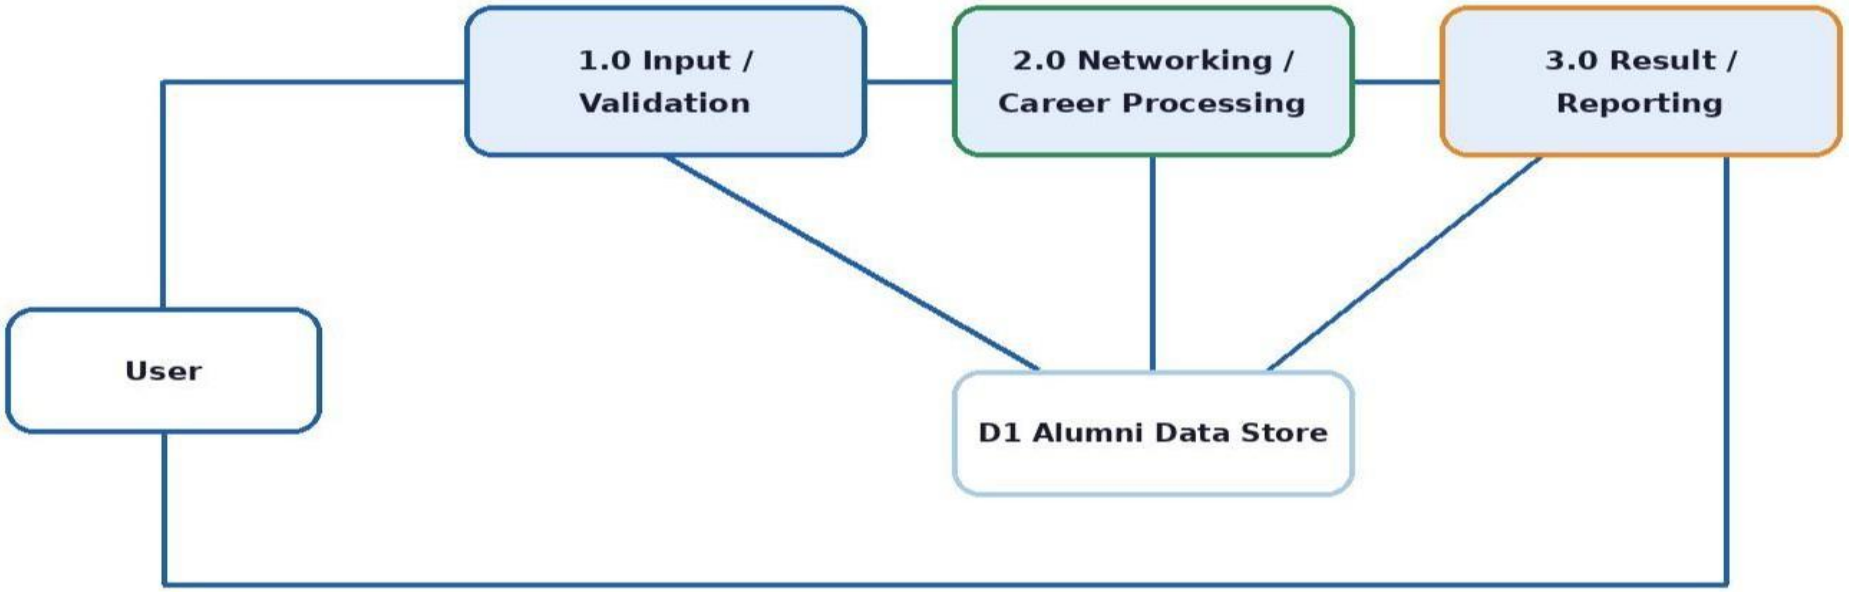

Context-level view of the complete system

The Level-0 DFD represents the system as one process and identifies the major external entities and information exchanged.

# 11. Data Flow Diagram — Level 1

Detailed decomposition of the main system process

**Typical flow: capture input → validate → process / predict → store required data → generate result.**
